Voici les avantages de ce type de pose :

- Permet le jointoiment du revêtement de sol ou de mur.

Façades

Grâce à une faible absorption d’eau, le grès cérame est un matériau idéal pour les façades. Les systèmes d’installation des façades sont les suivantes :

- Agrafe apparente.
- Ancrage encapsulé.
- Ancrage chimique.

Voici les avantages de ce type de pose :

- Isolation acoustique.
- Isolation thermique.
- Imperméabilité.

4. REJUNTADO

SELECCIONAR COLOR DE REJUNTADO

A criterio de cada cliente, deberá seleccionar una pasta de rejuntado apta para cerámica del color que prefiera.

Nosotros recomendamos que sea de un tono similar al de la pieza de cerámica.

APLICACIÓN

Siempre despues de que el material esté instalado y seco, introducir entre las piezas de cerámica la cantidad necesaria para llenar la junta con una paleta de goma. Rápidamente con una esponja bien humedecida, retirar el sobrante. Repetir el proceso hasta cubrir todas las juntas de la pared o del pavimento.

5. LIMPIEZA POSTERIOR A LA OBRA

Antes de limpiar nuestro material cerámico, será necesario que apartemos todos aquellos elementos que entorpezcan la limpieza para poder llegar a todos los rincones y eliminar por completo la suciedad. De este modo, deberemos apartar escaleras, herramientas y demás obstáculos que puedan dificultar esta tarea.

A continuación barreremos o aspiraremos el suelo de cerámica para retirar así el polvo y demás restos sólidos que pueda haber, como tornillos, grapas, crucetas, etc. Deberemos hacer hincapié en las esquinas o rincones de las estancias, ya que es donde suele acumularse este tipo de suciedad.

Seguidamente, ya se podrá empezar a fregar el piso cerámico y, para ello, se puede optar entre algún producto comercial específico para suelos de cerámica. De este modo, se deberá mezclar el limpiador comercial (siguiendo las instrucciones del envase) en el cubo de agua y limpiar toda la superficie cerámica con la fregona.

En los casos que haya pegotes de cemento o de material de rejuntado, podremos deshacernos de ellos con un estropajo suave (haremos una prueba primero sobre un trozo de pieza en la que, en el caso de que se pudiese rayar, no se vea la imperfección para asegurarnos de que podemos usar el estropajo seleccionado).

6. MANTENIMIENTO

Muchos productos de limpieza de uso general que están disponibles son aceptables para el uso en nuestros productos. Se pueden emplear para la limpieza diaria detergentes o desengrasantes diluidos en agua caliente, según las indicaciones del envase del limpiador.

Es importante que el limpiador no tenga base de aceite, grasa animal o jabón. Estos componentes pueden dejar un residuo invisible al atrapar la suciedad (estratificaciones de cal de detergente o residuos de suciedad). También es importante que la baldosa reciba un enjuague a fondo con agua limpia después de que el proceso de limpieza se haya completado.

******Es muy importante tener en cuenta que el ácido fluorhídrico (HF) y derivados pueden dañar irremediablemente la baldosa.

Los pasos generales de limpieza regular para nuestros productos cerámicos se pueden resumir del siguiente modo:

- Retirar cualquier residuo sólido o líquido de la baldosa, barriendo con una escoba de cerdas suaves o pasando la aspiradora.

- Limpiar los derrames líquidos tan pronto como sea posible.

- Aplicar la cantidad y dilución del limpiador recomendadas para la baldosa (ver indicaciones del fabricante del limpiador).

Durante su uso, la limpieza de la baldosa debe hacerse de forma similar a la limpieza de cristales. Se pueden emplear productos de tipo amoniacal e incluso lejía, ambos diluidos.

4. GROUTING

SELECTING GROUT COLOUR

A grout suitable for ceramics must be sourced in the client’s chosen colour.

We recommend a shade similar to that of the tile.

APPLICATION

When the tiles are installed and the cement has dried, fill the joint with paste using a rubber grouting trowel. Quickly remove any surplus with a wet sponge. Repeat the process until all joints are filled.

5. FINAL CLEAN UP

Before we start cleaning, the site must be cleared of anything that could hinder access to any part. We need to be able to reach into every corner in order to clean completely. This means removing ladders, tools or any obstacle that could get in the way.

Then we sweep or vacuum the tiled floor to remove any dust or other foreign objects that there might be, such as screws, clips or spacers. Special attention must be paid to corners of the area, as this is where this type of residue tends to gather.

Now the cleaning can begin. Any preferred commercial product may be chosen if it is specifically designed for tiled floors. The commercial product must be mixed with water according to the product label. Then it is used to clean the whole area with a mop.

If we find traces of cement or grout, we can remove them using a smooth scourer. Firstly we test the scourer on a piece of tile to be certain that it does not leave scratches.

6. MAINTENANCE

Many commercially available cleaning products are suitable for use with our products. Day to day cleaning can be done with detergents or degreasers diluted in hot water, following the instructions on the product label.

Products based on oil, animal fat or soap must not be used. These substances can leave an invisible residue when cleaning, such as layers of detergent or dirt. When the cleaning is complete, the tiling must be copiously rinsed with clean water.

******It is vitally important to remember that hydrofluoric acid or derivatives thereof can do irreparable damage to the tiling.

Following are the recommended steps for the regular cleaning of our products:

- Remove any solid or liquid residue from the surface using a soft broom or a vacuum cleaner.
- Clean off any liquid spillages as soon as possible.
- Dilute and apply the product according to the instructions.

Tiling should be cleaned similarly to glass surfaces. Ammonium based products and bleach can be used if diluted.

4. JOINTOIEMENT

CHOISIR LA COULEUR DES JOINTS

Selon leurs goûts, les clients peuvent choisir la couleur souhaitée pour l’enduit de jointoiment spécial céramique.

Nous conseillons un ton semblable à celui du carreau de céramique.

APPLICATION

Une fois le matériau posé et sec, introduire la quantité nécessaire entre les carreaux de céramique et remplir le joint avec une truelle en caoutchouc. À l’aide d’une éponge bien humide, retirer rapidement le surplus. Répéter l’opération de façon à couvrir la totalité des joints du mur ou du sol.

5. NETTOYAGE FIN DE CHANTIER

Avant de nettoyer le matériau céramique, il faut déplacer tous les éléments susceptibles de gêner le nettoyage pour pouvoir atteindre tous les recoins et éliminer entièrement la saleté. C’est pourquoi il faut ôter les échelles, les outils et tout autre obstacle qui pourrait entraver cette tâche.

Passer ensuite le balai ou l’aspirateur sur le sol en céramique pour éliminer la poussière et les autres restes solides tels que vis, agrafes, croisillons, etc. Bien insister dans les coins et les angles des pièces, c’est-à-dire là où ce type de saleté a généralement tendance à s’accumuler.

On peut ensuite commencer à passer la serpillière sur le sol, en choisissant pour cela dans le commerce un produit spécialement conçu pour les sols en céramique. Bien mélanger le produit de nettoyage dans un seau d’eau (en respectant les instructions de l’emballage), et nettoyer toute la surface en céramique à l’aide d’une serpillière.

Lorsqu’il reste des traces de ciment ou de matériau de jointoiment, on peut les éliminer en utiliser un tampon doux (pour savoir si le tampon sélectionné convient, commencer par faire un test sur un morceau de céramique peu visible, de manière à ne pas voir l’imperfection en cas de rayure).

6. ENTRETIEN

Parmi les produits d’entretien général disponibles, nombreux sont ceux qui peuvent être utilisés sur nos produits. Pour le nettoyage quotidien, on peut utiliser des détergents ou des dégraissants dilués dans l’eau chaude, selon les indications de l’emballage du nettoyant.

Il est important de choisir un nettoyant qui n’est pas à base d’huile, de graisse animale ou de savon. Ces composants peuvent laisser un résidu invisible lorsqu’ils retiennent la saleté (stratifications de calcaire de détergent ou résidus de saleté). Il est important de bien rincer le carreau à l’eau propre après avoir terminé le processus de nettoyage.

******Il est important de savoir que l’acide fluorhydrique (HF) et ses dérivés peuvent abîmer le carreau de façon irréversible.

On peut résumer de la façon suivante les étapes générales de nettoyage ordinaire de nos produits en céramique :

- Retirer tout résidu solide ou liquide du carreau à l’aide d’un balai à poils souples ou d’un aspirateur.
- Nettoyer les liquides déversés aussitôt que possible.
- Respecter la quantité et la dilution du nettoyant recommandées pour le carreau (voir indications du fabricant du produit).

Pendant l’usage, effectuer le nettoyage du carreau de la même manière que le nettoyage des vitres. On peut utiliser des produits à base d’ammoniaque et même de l’eau de Javel, tous deux dilués.

4. VERFUGUNG

VERFUGUNGSFARBE AUSSUCHEN

Der Kunde kann die Verfugungspaste für Keramik in der gewünschten Farbe auswählen. Wir empfehlen, dass diese Farbe dem Keramikstück ähnelt.

ANWENDUNG

Nachdem das Material verlegt und trocken ist, kann mit einer Gummispachtel die geeignete Menge Paste zwischen die Keramikstücke gepresst werden. Danach müssen die Reste sofort mit einem feuchten Schwamm entfernt werden. Der Vorgang wird wiederholt, bis alle Fugen an der Wand oder dem Belag geschlossen sind.

5. REINIGUNG NACH DER VERLEGUNG

Bevor das Keramikmaterial gereinigt wird, ist es notwendig, dass wir alle Elemente, welche die Reinigung stören könnten, zu entfernen, um in alle Ecken reichen zu können, um den Schmutz vollständig entfernen zu können. So müssen also Leitern, Werkzeuge und sonstige Hindernisse entfernt werden, die die Aufgabe behindern. Danach kehren oder saugt man den Keramikboden und entfernen den Staub und andere feste Reste wie Schrauben, Klammern, Profile, usw. Es muss besonders auf die Ecken der Räume geachtet werden, da sich dort mehr Schmutz ansammelt.

Darauf kann der Keramikboden mit einem Mopp gereinigt werden, wobei ein spezifisches Produkt für Keramik ausgesucht werden kann. So wird das gewählte Reinigungsprodukt (laut den Angaben auf der Verpackung) in einem Eimer Wasser verdünnt und die gesamt Oberfläche mit dem Mopp gereinigt.

Wenn Zementreste oder Reste des Verfugungsmaterials vorhanden sind, kann man diese mit einem weichen Schwamm entfernen (zuerst an eine wenig sichtbaren Stelle probieren, ob das Stück verkratzt. So wird sichergestellt, dass der Schwamm benutzt werden kann).

6. REINIGUNG

Viele verfügbare, handelsübliche Reinigungsprodukte können auf unseren Produkten benutzt werden. Für die tägliche Reinigung können Reinigungsmittel oder Fettlösmittel in warmem Wasser verdünnt werden, immer nach den Angaben auf der Verpackung.

Es ist wichtig, dass das Reinigungsmittel keine Ölbasis, Tierfettbasis oder Seifenbasis habt. Diese Mittel können unsichtbare Rückstände hinterlassen, die Schmutz aufnehmen können (Kalkrückstände der Reinigungsmittel oder Schmutz). Es ist auch wichtig, dass die Fliese nach dem Reinigungsvorgang gründlich mit Wasser abgewischt wird.

******Es ist sehr wichtig, dass Flusssäure (HF) und Derivate die Fliese unabwendbar beschädigen können.

Die allgemeinen Schritte für eine regelmäßige Reinigung unserer Keramikprodukte können wie folgt zusammengefasst werden:

- Jegliche feste oder flüssige Rückstände von der Fliese entfernen, indem mit einem weichen Besen gekehrt oder mit einem Staubsauger gereinigt wird.
- Flüssige Reste so bald wie möglich entfernen.
